	FIRST AID
If swallowed⊠	N Call a poison control center or doctor immediately for treatment advice. N Have person sip a glass of water if able to swallow. N Do not induce vomiting unless told to by a poison control center or doctor. N Do not give anything to an unconscious person.
If in eyes⊠	N Hold eyes open and rinse slowly and gently with water for 1⊠-20 minutes. N Remove contact lenses, if present, after the first ⊠ minutes, then continue rinsing. N Call a poison control center or doctor for treatment advice.
If on skin⊠	N Take off contaminated clothing. N Rinse skin immediately with plenty of water for 1⊠-20 minutes. N Call a poison control center or doctor for treatment advice.
If inhaled⊠	N Move person to fresh air. N If person is not breathing, call \( \text{M11} \) or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible. N Call a poison control center or doctor for further treatment advice.

Have the product container or label with you when calling a poison control center or doctor or going for treatment. In case of medical emergency for additional information call toll free 1-200-204-2000.

NEW- 509 / 503: This product may pose an aspiration pneumonia hazard. Contains petroleum distillates.

# PRECAUTIONAR STATEMENTS

# A ARDS TO UMANS AND DOMESTIC ANIMALS CAUTION

Harmful if swallowed, absorbed through skin or inhaled. Avoid contact with skin, eyes, or clothing. Avoid breathing spray mist. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove and wash contaminated clothing before reuse.

#### PERSONAL PROTECTI E E UIPMENT

Mixers, loaders, others exposed to the concentrate, cleaners/repairers of equipment, and applicators applying as a dip treatment must wear long-sleeve shirt and long pants, chemical-resistant gloves such as barrier laminate, nitrile rubber (S 14 mils), neoprene rubber (S 14 mils), or viton (S 14 mils), chemical-resistant apron, and chemical-resistant footwear plus socks.

Applicators using hand held equipment must wear coveralls over long-sleeve shirt and long pants, chemical-resistant gloves such as barrier laminate, nitrile rubber (S 14 mils), neoprene rubber (S 14 mils), or viton (S 14 mils), chemical-resistant footwear plus socks, chemical-resistant headgear for overhead exposures, and a dust/mist filtering respirator (MSHA/NIOSH approval number prefix TC-21C), or a NIOSH approved respirator with any R, P or HE filter.

Applicators using aircraft or mechanical ground equipment (groundboom, airblast, etc.), and flaggers for aerial applications must wear long-sleeve shirt and long pants, and shoes plus socks.

Applicators using truck-mounted equipment with a handgun at the end of a hose (i.e., for commercial turfgrass or ornamental applications) and all other handlers not specified above must wear long-sleeve shirt and long pants, chemical-resistant gloves such as barrier laminate, nitrile rubber (\$ 14 mils), neoprene rubber (\$ 14 mils), or viton (\$ 14 mils), and shoes plus socks.

Follow manufacturerIs instructions for cleaning/maintaining personal protective equipment (PPE). If no such instructions for washables, use detergent and hot water. eep and wash PPE separately from other laundry.

Discard clothing or other materials that have been drenched or heavily contaminated with this products concentrate. Do not reuse them.

#### **ENGINEERING CONTROLS**

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides 040 CFR 120.240 (d) (4-6)1, the handler PPE requirements may be reduced or modified as specified in the WPS.

# U2 S 7R -- . .2

Users should⊠

- N Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- N Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- N Remove PPE immediately after handling this product. Wash the outside of gloves before removing, As soon as possible, wash thoroughly and change into clean clothing.

#### EN IRONMENTAL A ARDS

This chemical can contaminate surface water through aerial and ground spray applications. Under some conditions, it may also have a high potential for runoff into surface water after application. These include poorly draining or wet soils with readily visible slopes toward adjacent surface waters, frequently flooded areas, areas overlaying extremely shallow ground water, areas with in-field canals or ditches that drain to surface water, areas not separated from adjacent surface waters with vegetated filter strips, and areas overlaying tile drainage systems that drain to surface water.

This pesticide is toxic to invertebrates. Do not apply directly to water or to areas where surface water is present or to intertidal areas below the mean high-water mark. Drift and runoff may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment washwater or rinsate.

## DIRECTIONS FOR USE

1\(\times\_1\) \(\times\_1\) \(\t

R+12\* +32/6+ 12(+1(+,16+22/32 2 /2 262\*2) 22

Do not apply this product in a way that will contact workers or other persons, either directly or indirectly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

#### AGRICULTURAL USE RE UIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 120. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval of 12 hours for ornamental uses. The restricted entry interval for WPS uses is 24 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is coveralls, chemical-resistant gloves such as barrier laminate, nitrile rubber (S 14 mils), neoprene rubber (S 14 mils), or viton (S 14 mils), and shoes plus socks.

#### NON AGRICULTURAL USE RE UIREMENTS

The requirements in this box apply to ornamental and turf uses (golf courses, landscape and institutional areas) of this product that are NOT within the scope of the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR Part 120). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries or greenhouses. Do not enter or allow others to enter the treated area until sprays have dried.

In order to assure maximum crop tolerance and disease control, follow restrictions and precautions of the package label.

#### PRODUCT RESTRICTIONS

Use of this product at residential sites is prohibited.

Except for use on golf courses, if applying this product adjacent to a water body such as a lake, reservoir, river, permanent stream, marsh or natural pond, estuary, or commercial fishpond, there must be at least a 292-foot vegetative buffer strip between the water body and the point of application.

Do not apply this product when the wind direction is toward aquatic areas.

#### **TURF**

26XT\* FUNXICIDE is a foliar applied fungicide, prescribed for turfgrass disease control on golf courses, sod farms, and institutional areas where fine turf is grown. When used in conjunction with good turf management practices, 26XT FUNXICIDE is effective in controlling the following diseasesX

图62图 定 2 46图3\* Fixitl图从4004图 Dollar Spot, 图rown Patch, Earge Patch, Fusarium 图ight and Necrotic Ring Spot의 Beaf Spot and Melting Out, Microdochium Patch, Corticum Red Thread, Curvularia blight and Anthracnose (suppression).

Apply the prescribed rates as indicated in the table in 0.월 to 10 gallons of water per 1000 square feet. Do not drench. Do not allow the spray mixture to stand for longer than 12 hours as some breakdown of the product may occur. Maintain agitation during spray operations. Apply with a properly calibrated sprayer.

\*\*Mot resistered for use in California to control this disease.\*\*

Do not exceed a total of MI fluid oz. product/1000 ft2 per year (24 lbs a.i./A/year).

Do not make more than 6 applications per year.

Under severe conditions, the higher rate and/or shorter interval of applications are prescribed for all diseases. When disease pressure is light to moderate, the lower rates and longer intervals are prescribed. Do not mow or irrigate treated areas until the foliage is completely dry, usually a 24-hour waiting period following treatment is preferred.

Do not mix with any sticker, extender, or wetting agent. Do not graze animals on treated turf. Do not feed clippings from treated turf to livestock or poultry.

For golf courses only, do not apply to turf cut higher than 10 on golf holes where water bodies are present.

Not registered for use in California to control this disease.

# TAN MI TURES

#### ADDITIONAL DISEASE CONTROL

If turf is threatened by additional diseases, 26XT FUNXICIDE is compatible with most commonly used fungicides such as ProStar<sup>a</sup>, Compass<sup>a</sup>, and Heritage<sup>a</sup>. If a tank mixture is used, follow label directions for the use of that product.

Do not exceed a total of XXI fluid oz. 26XIT FUNXICIDE per 1000 ft<sup>2</sup> per year (24 lbs a.i./A/year) with a maximum of 6 applications.

22 46 864M M22 144M M2 246M +) 134x For management of Summer Stress Complex/Summer Decline, apply Chipco® SignatureP Fungicide at 4 to ⊠ ounces of product per 1000 square feet with 26MT FUNNICIDE at 2 to 4 nunces of product per 1000 square feet.

PEW R2 S16. B Pythium blight will be controlled by the tank mixing of Chipco<sup>a</sup> SignatureP Fungicide or Banol Fungicide with 26BT FUNBICIDE. If a tank mixture is used, follow label directions for the use of that product and apply at the rate prescribed for control of the target disease organism.

3 № 3 № 1 : Tank-mix with a labeled rate of fungicide for the preventive control of ⊠ray Snow Mold.

Application must be made in autumn before snow cover occurs. Apply with sufficient water to obtain adequate coverage (1 to 🗵 gallons of spray solution per 1000 square feet). Use the higher rate if the turf remains frozen prior to snow cover. For optimal control, reapply this treatment if a winter thaw and loss of snow cover occurs.

Not all products are registered in all states please verify state registration of ProStar, Compass, Heritage, Cleary 5 1200 F, Chipco Signature Fungicide, and 2 and 1 fungicide in your state before selling, distributing, or using.

# **DIRECTIONS FOR USE ON ORNAMENTALS**

## NOT FOR RESIDENTIAL USE

#### FIELD LANDSCAPE AND GREEN OUSE ORNAMENTALS AND CONIFER NURSERIES

26\textre TFUNDICIDE is a broad spectrum fungicide that may be applied safely to a wide range of ornamental flowering and foliage plants, either as a foliar spray, drench or dip. Please read specific instructions and use only as directed.

PLEINING MEALEREN NEWS: Plant tolerances to 26\text{MEMICIDE} have been found to be acceptable in the specific genera and species listed on this label. It is not possible to evaluate every species or variety of ornamental plant for its tolerance to 26\text{MEMICIDE}. The user must test for possible phytotoxic responses in other plants on a small area basis using prescribed rates prior to commercial use.

#### O TO USE GT FUNGICIDE AS A FOLIAR SPRA DRENC

FXMX6 X6XX When conditions become favorable for disease development, apply 26XT FUNXICIDE as a foliar spray to insure thorough coverage of the plant foliage.

Under severe disease pressure, use the highest prescribed rate and/or the shortest spray interval. When disease pressure is light to moderate, the lower rates and longer intervals are prescribed.

#### RESTRICTIONS

- N Do not apply more than 2. Quarts product/acre per application.
- N Do not make more than 4 applications per crop per year.

263).: Apply 26XT FUNXICIDE as a drench at seeding and/or after transplanting for Rhizoctonia control. Under severe disease pressure, use the highest prescribed rate. When disease pressure is light to moderate, the lower rate is prescribed.

#### RESTRICTIONS

- N Do not exceed a total of ∞ fl oz product /1000 sq ft per year (24 lbs a.i./A/. ear).
- N Do not make more than 6 applications per year.
- NOTEN Do not use 26NT FUNNICIDE on Spathiphyllum.

☑Do not use 26☑T FUN☑ICIDE as a drench on impatiens, and pothos.

#### TAN MI TURES

tophthora, 26MTR FUNMICIDE can be tank-mixed with AMETTER brand fungicide. Consult the AMETTE label for a complete listing of diseases controlled and for application rates.

#### If a tank mix with other fungicides is used, follow label directions for the use of that product and apply at the prescribed rate for control of the target disease organism. DIRECTIONS T ROUG SPRIN LER IRRIGATION S STEMS

Apply this product only through sprinkler irrigation systems including center pivot. Do not apply this product through any other type of irrigation system.

PRIME PRIME PRIME IN Remove scale, pesticide residues, and other foreign matter from the chemical tank and entire injector system. Flush with clean water,

NPPLIXXXXIIN IN NRXXXIIX : First prepare a suspension of 26XIT FUNXICIDE in a mix tank. Fill tank with 1/2 to X/4 the desired amount of water. Start mechanical or hydraulic agritation. Add the required amount of 26\tilde{X}T FUNIXICIDE, and then the remaining volume of water. (Suspension concentrations using the appropriate dosage per acre prescribed on this label of 26\tilde{X}T FUNIXICIDE per 1 to 4 gallons of water are prescribed) Then set sprinkler to deliver 0.1 to 0.12 inch of water per acre. Start sprinkler and uniformly inject the suspension of 260T FUNDICIDE into the irrigation water line so as to deliver the desired rate per acre. The suspension of 26🛛 FUNICIDE must be injected with a positive displacement pump into the main line ahead of a right angle turn to insure adequate mixing. If you have any other questions about calibration, contact State Extension Service specialists, equipment manufacturers or other experts.

NXXXX: When treatment with 26XT FUNXICIDE has been completed, further field irrigation over the treated area must be avoided for 24 to 4XI hours to prevent washing the chemical off the crop.

#### PRODUCT PRECAUTIONS FOR APPLICATIONS T ROUG SPRIN LER IRRIGATION S STEMS

Maintain continuous agitation in mix tank during mixing and application to assure a uniform suspension.

Wreater accuracy in calibration and distribution will be achieved by injecting a larger volume of a more dilute solution per unit time. The system must contain a functional check valve, vacuum relief valve. and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow. The pesticide injection pipeline must contain a functional, automatic, quickclosing check valve to prevent the flow of fluid back toward the injection pump. The pesticide injection pipeline must also contain a functional, normally closed solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shutdown. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops. The irrigation line or water pump must include a functional pressure switch, which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

Do not apply when wind speed favors drift, when system connection or fittings leak, when nozzles do not provide uniform distribution or when lines containing the product must be dismantled and drained. Crop injury, lack of effectiveness, or illegal pesticide residues in the crop may result from nonuniform distribution of treated water.

Allow sufficient time for pesticide to be flushed through all lines and all nozzles before turning off irrigation water. A person knowledgeable of the chemication system and responsible for its operation must shut the system down and make necessary adjustments.

Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the label-prescribed safety devices for public water supplies are in place.

#### SPRA DRIFT

non-target crops) is minimal (e.g., when wind is blowing away from the sensitive areas).

Avoiding spray drift at the application site is the responsibility of the applicator. The interaction of many equipment-and-weather-related factors determines the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions.

The following drift management requirements must be followed to avoid off-target drift movement from aerial applications to agricultural field crops. These requirements do not apply to forestry applications. public health uses or to applications using dry formulation.

- The distance of the outer most nozzles on the boom must not exceed Q the length of the wingspan or rotor.
- 2. Nozzles must always point backward parallel with the air stream and never be pointed downwards more than 4\text{\text{\text{M}}} degrees.

Where states have more stringent regulations, they must be observed. The applicator must be familiar with and take into account the information covered in the Aerial Drift Reduction Advisory Information. INFORM MAIN ON MREPLEM INC. (This section is advisory in nature and does not supersede the mandatory label requirements)

The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential, but will not prevent drift if applications are made improperly, or under unfavorable environmental conditions (see Wind, Temperature and Humidity, and Temperature Inversions below).

XX NXRXLLINX X RXPLXX IXX: (This section is advisory in nature and does not supersede the mandatory label requirements)

+olume MUse high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets.

- Pressure MDo not exceed the nozzle manufacturers prescribed pressures. For many nozzle types lower pressure produces larger droplets. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.
- Number of nozzles MUse the minimum number of nozzles that provide uniform coverage.
- N Nozzle Orientation MOrienting nozzles so that the spray is released parallel to the airstream produces larger droplets than other orientations and is the prescribed practice. Significant deflection from horizontal will reduce droplet size and increase drift potential.
- N Nozzle Type MUse a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid stream nozzles oriented straight back produce the largest droplets and the lowest drift.

MMMM LXNXMM: (This section is advisory in nature and does not supersede the mandatory label requirements)

For some use patterns, reducing the effective boom length to less than Q of the wingspan or rotor length may further reduce drift without reducing swath width.

APPLIXXXIXN XXIXXX (This section is advisory in nature and does not supersede the mandatory label requirements)

Applications must not be made at a height greater than 10 feet above the top of the largest plants unless a greater height is required for aircraft safety. Making applications at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

☑ ☑☑☑ ☑☑☑ ☑☑ ☑N☑ (This section is advisory in nature and does not supersede the mandatory label requirements)

When applications are made with a crosswind, the swath will be displaced downwind. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by

adjusting the path of the aircraft upwind. Swath adjustment distance must increase, with increasing drift potential (higher wind, smaller drops, etc.).

☑ IN☑: (This section is advisory in nature and does not supersede the mandatory label requirements)

Drift potential is lowest between wind speeds of 2 M10 mph. However, many factors, including droplet size and equipment type determine drift potential at any given speed. Application must be avoided below 2 mph due to variable wind direction and high inversion potential. NEXESS 20cal terrain can influence wind patterns. Every applicator must be familiar with local wind patterns and how they affect spray drift.

XXX PXRXXXRX XNX XXX IXXXX (This section is advisory in nature and does not supersede the mandatory label requirements)

When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.

Applications must not occur during a temperature inversion because drift potential is high. Temperature inversions restrict vertical air mixing, which causes small-suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light variable winds common during inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fogal however, if fog is not present, inversions can also be identified by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud funder low wind conditions) indicates an inversion, while smoke that moves unward and rapidly dissipates indicates good vertical air mixing.

# STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

P⊠ ⊠I⊠I⊠⊠ ⊠XR⊠⊠⊠ Store in a cool dry location.

PIX IN A COOL GRY LOCATION.

Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

wastes resulting from th

Non-refillable container. Do not reuse or refill this container. Offer for reconditioning, if appropriate. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows member of contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Offer for recycling, if available, or puncture and dispose of in a sanitary landfill or by other procedures approved by State and local authorities.

# PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS CAUTION

Harmful if swallowed, absorbed through skin or inhaled. Avoid contact with skin. eyes, or clothing. Avoid breathing spray mist. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove and wash contaminated clothing before reuse.

#### **ENVIRONMENTAL HAZARDS**

This chemical can contaminate surface water through aerial and ground spray applications. Under some conditions, it may also have a high potential for runoff into surface water after application. These include poorly draining or wet soils with readily visible slopes toward adjacent surface waters, frequently flooded areas. areas overlaying extremely shallow ground water, areas with in-field canals or ditches that drain to surface water, areas not separated from adjacent surface waters with vegetated filter strips, and areas overlaying tile drainage systems that drain to surface water.

This pesticide is toxic to invertebrates. Do not apply directly to water or to areas where surface water is present or to intertidal areas below the mean high-water mark. Drift and runoff may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment washwater or rinsate.

# STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal. PESTICIDE STORAGE

Store in a cool dry location.

PESTICIDE DISPÓSAL

Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

#### CONTAINER HANDLING

Non-refillable container. Do not reuse or refill this container. Offer for reconditioning, if appropriate. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Offer for recycling, if available, or puncture and dispose of in a sanitary landfill or by other procedures approved by State and local authorities.

This product contains a chemical know to the state of California to cause cancer.
